

VIRGINIA CORN HYBRID AND MANAGEMENT TRIALS IN 2013

Coordinators of Virginia Corn Hybrid Trials in 2013

Wade Thomason, Extension Specialist, Department of Crop and Soil Environmental Sciences, Virginia Tech
Harry Behl, Research Specialist Senior, Department of Crop and Soil Environmental Sciences, Virginia Tech
Elizabeth Hokanson, Research Associate, Department of Crop and Soil Environmental Sciences, Virginia Tech

Other contributors:

Bobby Ashburn, Agricultural Manager Senior, Tidewater Agricultural Research and Extension Center
Bruce Beahm, Foundation Seed Manager, Virginia Crop Improvement Association Foundation Seed Farm
Steve Gulick, Farm Manager, Northern Piedmont Center
Ned Jones, Farm Manager, Southern Piedmont Agricultural Research and Extension Center
Matt Yancey, Extension Agent, Rockingham County
Jon Wooge, Agricultural Program Coordinator, College Farm, Virginia Tech

Companies Participating in the 2013 Corn Hybrid Trials

Company	Brand	Address

Background Information

Performance trials of commercial corn hybrids were conducted at six locations in Virginia in 2013. The Mt. Holly location consisted of both an irrigated and non-irrigated test. All locations were planted with a Wintersteiger PlotKing 2600. All locations were harvested with a Massey-Ferguson 8XP plot combine. Yields have been adjusted to 15.5% moisture. Grain test weight, moisture, and plot grain weights were measured with a GrainGauge® manufactured by HarvestMaster. A list of the companies participating in the trials is shown in the above table. All hybrids entered in the Virginia trials were those submitted by commercial companies. The locations at which particular hybrids were entered were specified by the company. Companies entering hybrids were charged a fee for each hybrid per location to support the Virginia Corn Hybrid and Management Trials.

Yield Differences

Experimental plots vary in yield and other measurements due to location in the field and other factors which cannot be controlled. Statistics given in the tables are intended to help the reader make valid comparisons between hybrids. The magnitude of differences which may have been due to uncontrollable variation has been computed for the data and listed at the bottom of columns as the LSD (.05) (least significant difference with 95% confidence). Differences less than the LSD are assumed not to be real differences with 95% confidence.

Understanding Relative Yield

Companies entering hybrids decide which hybrids are planted at which locations. Combining and comparing absolute yield and other results from multiple sites is inappropriate when not all hybrids are planted at all locations. For example, one hybrid might have an unfair advantage in such a comparison because it was tested only at sites with ideal growing conditions. Another hybrid tested at sites with less-than-ideal growing conditions would have yields that tended to be lower. In this example, it would be difficult to determine whether

yield differences were because of differences in genetic yield potential or simply because of differences in the environmental conditions under which they were tested. The solution is to compare hybrids based on relative yields rather than absolute yields.

To calculate relative yield, the yield for each hybrid at each site is divided by the average yield for all hybrids tested at that same site and multiplied by 100. Once each hybrid at each site has been assigned a relative yield, comparisons can be made between hybrids tested at the same site or different sites. For hybrids tested at multiple sites, we can also calculate a multi-site relative yield average.

Relative yields of 100 indicate hybrids that were average performers. Relative yields greater than 100 indicate yields above-average. Relative yields less than 100 indicate yields below-average. The magnitude of the relative yield numbers indicate how far above or below average a hybrid performed. For example, a hybrid with a relative yield of 110 yielded 10% of above the average yield for all hybrids at that site.

Choice of Hybrids

When making hybrid selections it is important to realize that hybrids differ in their performance in different environments. Some hybrids are more adapted to a wide range of environments. Hybrid performance may vary with year and location variations in rainfall, temperature, pests and other environmental variables. In these experiments, many hybrids have essentially the same yield, and great care should be taken in interpreting the results of a single year's tests, especially at only one location. For these reasons it is important, whenever possible, to also look at a hybrid's average across locations when making hybrid selections. Multi-year averages give even greater confidence to hybrid performance decisions. The relative yield tables compare the yield of a hybrid to the average yield of all hybrids in the test. These tables are an excellent summary of yield potential compared to other hybrids.

2013 Virginia Corn Hybrid Plot Information

(Rates are on a per acre basis.)

Blacksburg Whitethorne Farm

Planted: May 3, 2013
Harvested: October 11-15, 2013
Population: 22,625 plants/acre
Pesticide: 2 qt Gly-4 Plus® + .75 lb Atrazine 90 + 1 lb Simazine 90DF + 1 oz Python® + 2 qt Bicep II Magnum® May 1, 2013; 5 lb Force® 3G at planting; 0.75 qt Atrazine 90 + 0.5 pt Banvel® June 17, 2013
Fertilizer: 40-40-40 pre-plant incorporated April 26, 2013; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 15 gal 30% UAN May 31, 2013
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: Hayter
Cooperator: Jon Wooge

Blackstone Southern Piedmont Agricultural Research & Extension Center

Planted: April 24, 2013
Harvested: September 12, 2013
Population: 23,000 plants/acre
Pesticide: 2 qt Buccaneer ® + 3 qt Lumax® April 16, 2013; 5 lb Force® 3G at planting
Fertilizer: 1000 lb 10-10-10 pre-plant incorporated April 15, 2013; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 80 lb N top-dressed May 22, 2013
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: Appling sandy loam
Cooperator: Ned Jones

Holland Tidewater Agricultural Research & Extension Center

Planted: April 16, 2013 no-till into a cereal cover after peanuts
Harvested: September 5, 2013
Population: 23,350 plants/acre
Pesticide: 1.5 oz 2,4-D amine + 22 oz Roundup WeatherMAX® April 1, 2013; 1 qt AA-Trex® 4L + 2 qt Intro® April 13, 2013; 5 lb Force® 3G at planting
Fertilizer: 300 lb 8-15-36 March 29, 2013; 60 units N using 24-0-0-3 April 13, 2013, 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 100 units 24-0-0-3 May 30, 2013
Plot Size: 2 rows 35' x 30" 4 replications
Soil Type: Eunola, Nansemond and Uchee
Cooperator: Bobby Ashburn

Mt Holly (dryland no-till site) Virginia Crop Improvement Association Foundation Seed Farm

Planted: April 18-23, 2013 no-till into soybean stubble
Harvested: September 13, 2013
Population: 23,050 plants/acre
Pesticide: 3 pt Lumax® + 1.5 lb Princep® pre-plant incorporated + 5 lb Force® 3G at planting; 54 oz Halex™ + 12 oz glyphosate post-emerge

Fertilizer: 60-50-80 pre-plant incorporated; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 90 lb N + 11 lb S side-dressed May 23, 2013
Soil Type: State fine sandy loam
Cooperator: Bruce Beahm

Mt Holly (irrigated site) Virginia Crop Improvement Association Foundation Seed Farm

Planted: April 17, 2013 no-till into soybean stubble
Harvested: September 14, 2013
Population: 28,750 plants/acre
Pesticide: 5.5 pt Lumax® + 1 lb Atrazine + 1 lb Princep® pre-plant incorporated; 5 lb Force® 3G at planting
Fertilizer: 60-50-80 pre-plant incorporated; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 140 lb N + 17 lb S applied June 4, 2013 + 65 lb N through irrigation June 20, 2013
Irrigation: 0.2" June 20 0.9" July 18
 1.0" June 25 1.0" July 26
 0.5" July 8 0.6" August 4
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: State fine sandy loam
Cooperator: Bruce Beahm

Orange Northern Piedmont Center

Planted: May 15, 2013
Harvested: October 18-21, 2013
Population: 21,375 plants/acre
Pesticide: 2.1 qt Bicep® + 1 qt Atrazine + 1.5 qt Roundup® April 24, 2013; 5 lb Force® 3G at planting
Fertilizer: 39-100-100 April 26, 2013; 100 lb N side-dressed June 14, 2013
Plot Size: 2 rows 30' x 30" 4 replications
Soil Type: Davidson silt clay loam
Cooperators: Steve Gulick

Shenandoah Valley (Timberville - Thanks to Linden Heatwole)

Planted: May 20, 2013 no-till into alfalfa
Harvested: October 31, 2013
Population: 22,220 plants/acre
Pesticide: 1 qt Roundup® + 1 qt Wex ground conditioner + 1 qt 2,4-D + 1 oz Verdict™ + 1 lb sugar; 5 lb Force® 3G at planting; 5oz NorthStar® + 12 oz Quilt® post-plant (Quilt® applied aerially)
Fertilizer: Preplant 6000 gal liquid dairy with Guardian™ N stabilizer + 1 qt AMS Complete; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 87 lb N as UAN.
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: Massanetta silt loam
Cooperators: Matt Yancey and Linden Heatwole

* Relative yield is calculated by dividing the yield of a hybrid by the average yield of all hybrids of all maturities at that location. A hybrid with a relative yield of 105 was 5% above the average of all hybrids at that location. The value of 105 is not a yield but a value relative to all other yield values at that location. Relative yields are listed in order of descending mean values.

¹ Days to maturity provided by company; differences in maturity rating methods may exist between companies.
